

This Carton contains the fuel bed GE4BLK, GE4SWK or GE4DWK which is suitable for use with the electric fire models GE4.

**Note: These fuel bed components must never be used in a gas appliance**

The illustrations below show suggested fuel bed layouts for your GE4 electric fire. These illustrations are for guidance; you may wish to arrange your fuel bed components to suit your individual taste.

Before you lay the logs provided in this carton, install the Glass Embers and Vermiculite provided with the appliance. Spread the Glass Embers evenly over the fuel bed base. If desired, sprinkle Vermiculite into the gaps between the Glass Embers. **Be careful when handling the glass embers as they may have sharp edges. Wear gloves if necessary.**

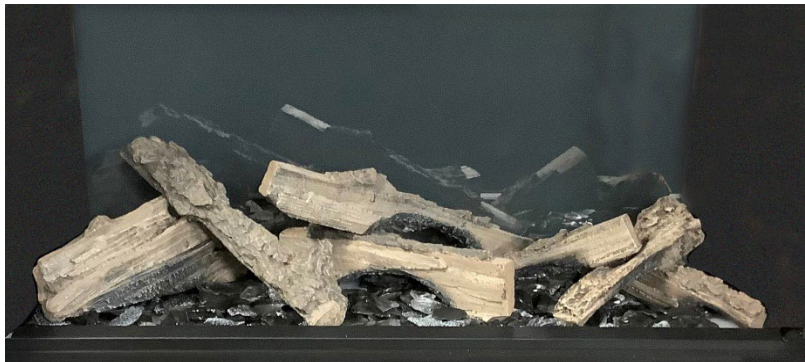

- When installing the logs, turn the fireplace's lights on to help placing them in the best position to highlight their details.
- Once the logs are installed, use a bit of putty (included) to prevent a cross log from sliding off the bottom log it sits on.

## GE4BLK

## GE4SWK

## GE4DWK
